

COMBIMASTER 350

VEGNIK

SUBSOILER AND SEEDBED PREPARATION IN ONE

Compact 2 in 1 machine

Remediate soil compaction

Efficient seedbed preparation preventing soil sealing

2 IN 1 MACHINE

The CombiMaster 350 is a subsoiler and cultivator in one. Ideal for aerating the soil and preparing a perfect seedbed. Specially designed to achieve the maximum capacity with a carried machine. It is easy to mount any seed coulterbar. This makes it possible to perform 3 operations in 1 working pass without riding the ground in between. The required power and therefore fuel consumption is very low.

REMEDiate SOIL COMPACTION

The ground is not driven upon to do another tillage after subsoiling. As a result, no tracks of vehicles are left behind and the soil is not compacted. The subsoiler and cultivator frame are individually adjustable in height to achieve the perfect working depth for the subsoiler as well for the cultivator.

EFFICIENT SEEDBED PREPARATION PREVENTING SOIL SEALING

The machine is built in such a way that a working width of 3.5 meters is possible with a transport width of 3.5 meters. By means of the integrated 4-point linkage both the trailing roller and the seed coulterbar are lifted up forward. This moves the centre of gravity forward, allowing safe transport. The trailing roller ensures a constant working depth to reduce the soil porosity and limit evaporation. The seedbed is cultivated without the topsoil becoming too fine. This way the soil will be prevented for sealing.

BENEFITS

- ✓ High capacity because of 3 operations in one
- ✓ Maximum capacity with a carried machine
- ✓ Very low power required (130 HP)
- ✓ Can also be used solely as a subsoiler

OPTIONS

- ✓ 4 instead of 6 subsoiler tines and 1 straight tine in the middle
- ✓ Extra cultivator tines set
- ✓ Other types of cultivator shares
- ✓ Other types of trailing rollers possible

STANDARD PROPERTIES

Working width: 3.5m
 Transport width: 3.5m
 Weight: 2350kg (without coulterbar)
 Tine distance subsoiler c.o.h.: 620 or 850mm
 Tine distance cultivator: 9 x 41cm
 Can also be used only as a subsoiler
 Working depth subsoiler: 25-50cm
 Working depth cultivator: 0-30cm
 Tine overload protection by shear bolts
