

MULTIMASTER 450 / 600

Soil aeration, seed bed preparation and seeding in one fell swoop.

- ✓ Perfect seed bed
- ✓ Perfect sowing technique
- ✓ Machine components to be used separately
- ✓ Very high capacity

VEGNIËK

PERFECT SEED BED

Using the Hunter soil aerator, the substrate is first aerated for good water permeability and rooting. Then it is thoroughly cultivated by the MultiMaster. A disk packer roller presses the soil to be seeded. This creates a perfect connection of the ground, but there leaves a sufficient amount of coarse soil against compaction. The disc coulters with the pressure wheel then run exactly where the disk packer pressed. An after-harrow works the whole lot so that everything is covered nicely. All this happened without riding the ground between the various operations.

THREE MACHINES IN ONE

Due to the unique concept, the machine can be used in three ways:

1. As a combination of soil aerator, seed bed preparation and sowing in one go.
2. The Hunter soil aerator can be disconnected from drawbar with seed tank and MultiMaster. As a result, this can be used as a stand-alone with a working width of 6 meters.
3. Then the drawbar with seed tank can be connected to the MultiMaster 450 cultivator. Thus, for example, it can be used for a shallow grain stubble operation in combination with sowing.

KNOCK-ON SYSTEEM

The cultivator teeth of the MultiMaster are equipped with the Knock-On system from Kverneland. This makes it possible to change blades quickly. These can vary in width from 80 mm to 320 mm. This makes it possible to completely overlap the blades in order to be able to cut across the entire working width.

VERY HIGH CAPACITY

All operations are carried out in 1 operation. With a working width of 4.5 or 6.0 meters, this machine has an enormous capacity, without making any concessions on the quality of work.

THE BENEFITS:

- ✓ Three operations in one
- ✓ Machine can be used in different configurations
- ✓ Little pulling force needed in relation to the working width
- ✓ Large crop residues
- ✓ Easy operation with headland function
- ✓ Hydraulics via Load-Sense
- ✓ Solid construction with perfect finish
- ✓ Short turning circle due to sharp steering angle
- ✓ Perfect pulling line that gives tractor a lot of grip
- ✓ Low fuel consumption per hectare

VARIOUS OPTIONS:

- ✓ Different blades available for the MultiMaster cultivator
- ✓ To be carried out in 4.5 and 6.0 meters working width
- ✓ Larger tire size

STANDARD PROPERTIES:

- Working width: 4.5 or 6.0 meters
- Length: 9.0 meters
- Transport width: 2.98 meters
- Coupling: lifting unit CAT III
- Tooth distance aerator: 60 or 75 cm
- Tooth distance cultivator: 28 cm
- Tires: 520/50R17
